

Garlic Oil Spray

by Jane Thibaudeau

For people having difficulties with beetles and bugs on their plants and are looking for a natural solution.

I usually make up several batches at once in the spring or early summer using the old garlic from the previous year.

Good luck!

Tools

Container to mix that will hold at least 3 cups

Funnel (optional)

Spray bottle

Ingredients

10 cloves of garlic

2 tsp of mineral oil

2 1/2 cups of water

1 tsp dish soap

Method

Soak garlic in the mineral oil for 24 hours.

Strain garlic, then add water and soap.

Put into a spray bottle and spray those pesky bugs!
